PROJECT 3 · FINAL PRESENTATION

Interview Prep Report

Job post + CV / GitHub → a role-specific interview prep report

Julia Antunes · Career services · Built with n8n

WHY · THE PROBLEM

The problem, and who has it

WHO

Job seekers with an upcoming interview

Applicants need a focused plan for a specific role and employer.

WHAT THEY DO TODAY

Research + preparation

Read the job post, research the employer, then choose relevant examples.

THE PAIN

Time and energy cost

Interview preparation can be very time consuming and cause stress to candidates.

HOW · THE DATA FLOW

How it works

Company name + job post + CV or GitHub → a role-specific interview prep report

Step 1

Submit

Company name, job post, CV as PDF and/or GitHub

Step 2

Gather

Job text, CV file and public repositories

Step 3

Research

Tavily company search + GNews

Step 4

Generate

GPT-4o-mini drafts; evidence and output are validated

Step 5

Show

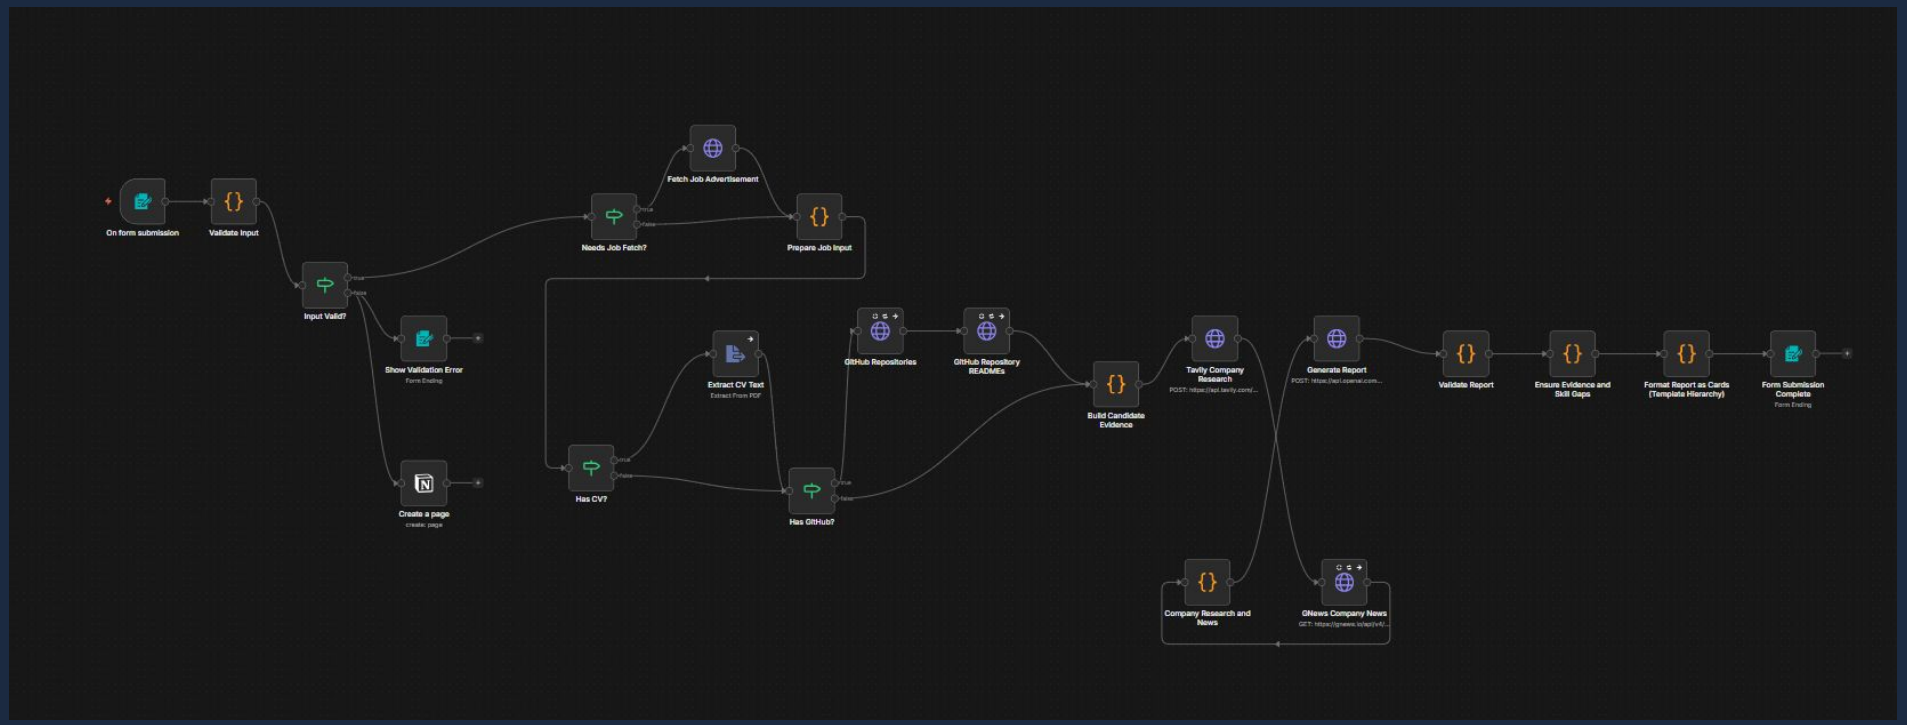

HTML report on the form completion screen

- *Invalid inputs are flagged in the form*
- *Later workflow or API errors may stop the run*
- *The Notion error-alert node sends an alert whenever an input is invalid*

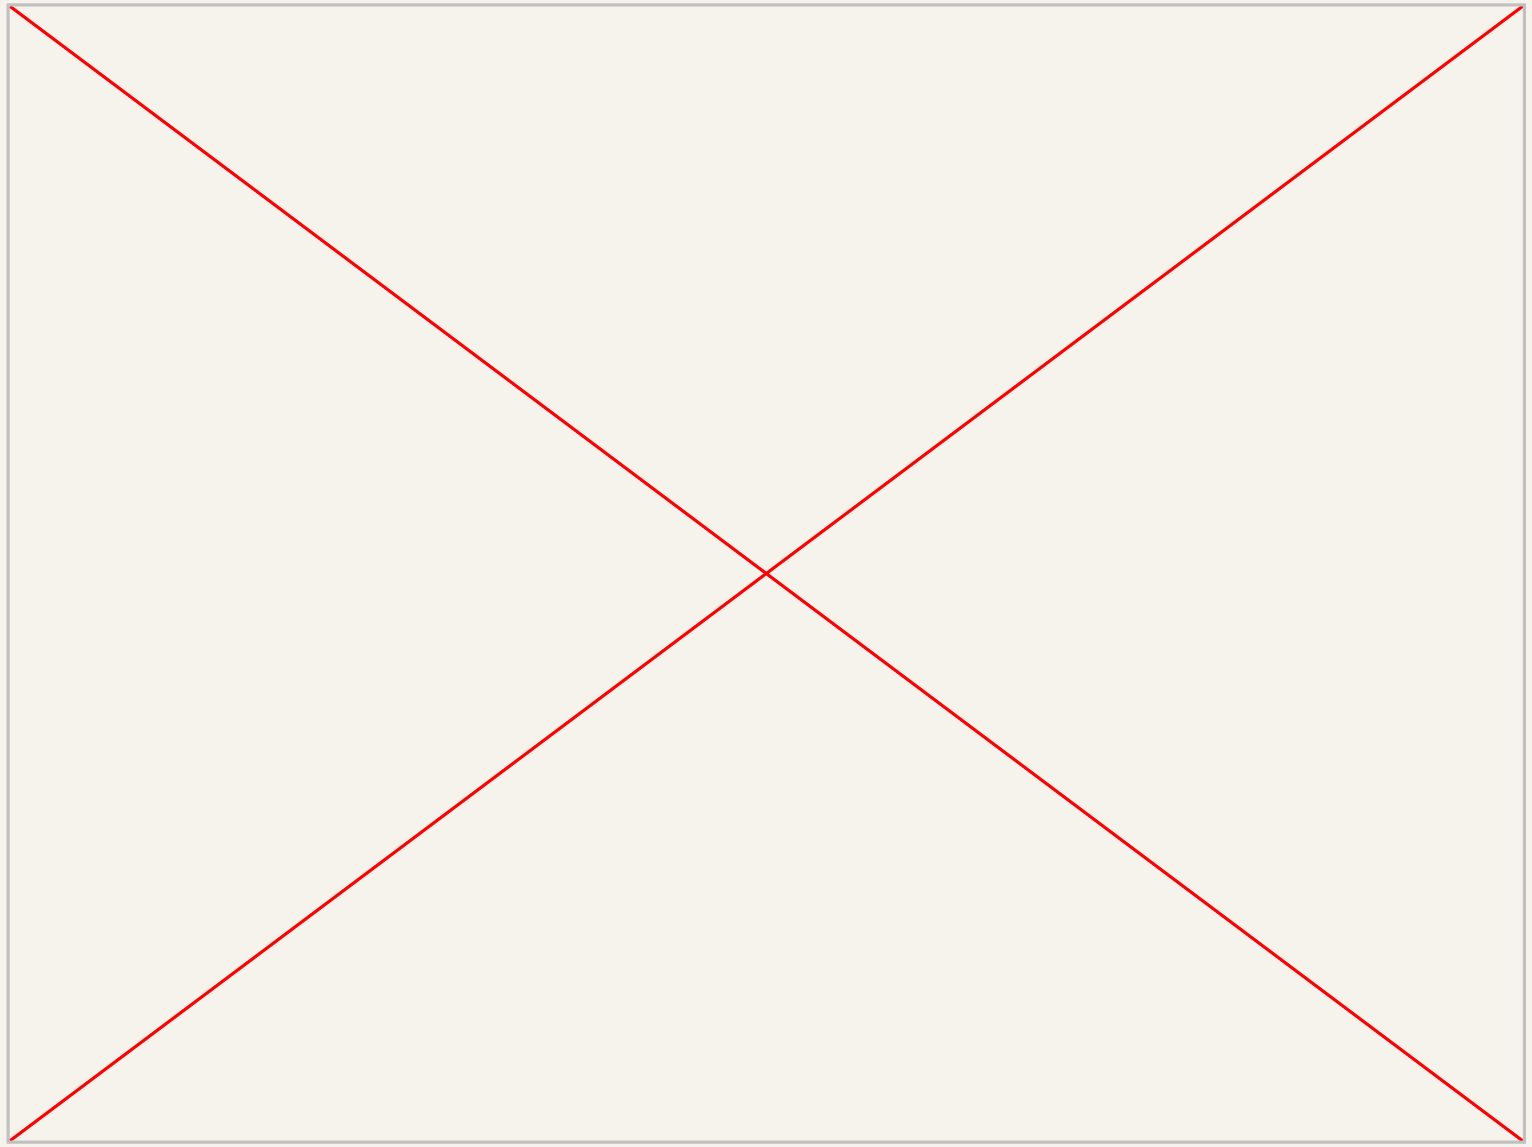

HOW · DEMO

See it working.

Example: DAW Program Manager - AI & Automation → tailored interview prep report

DEMO

SO WHAT · THE RESULT

What the user gets

Seven report sections

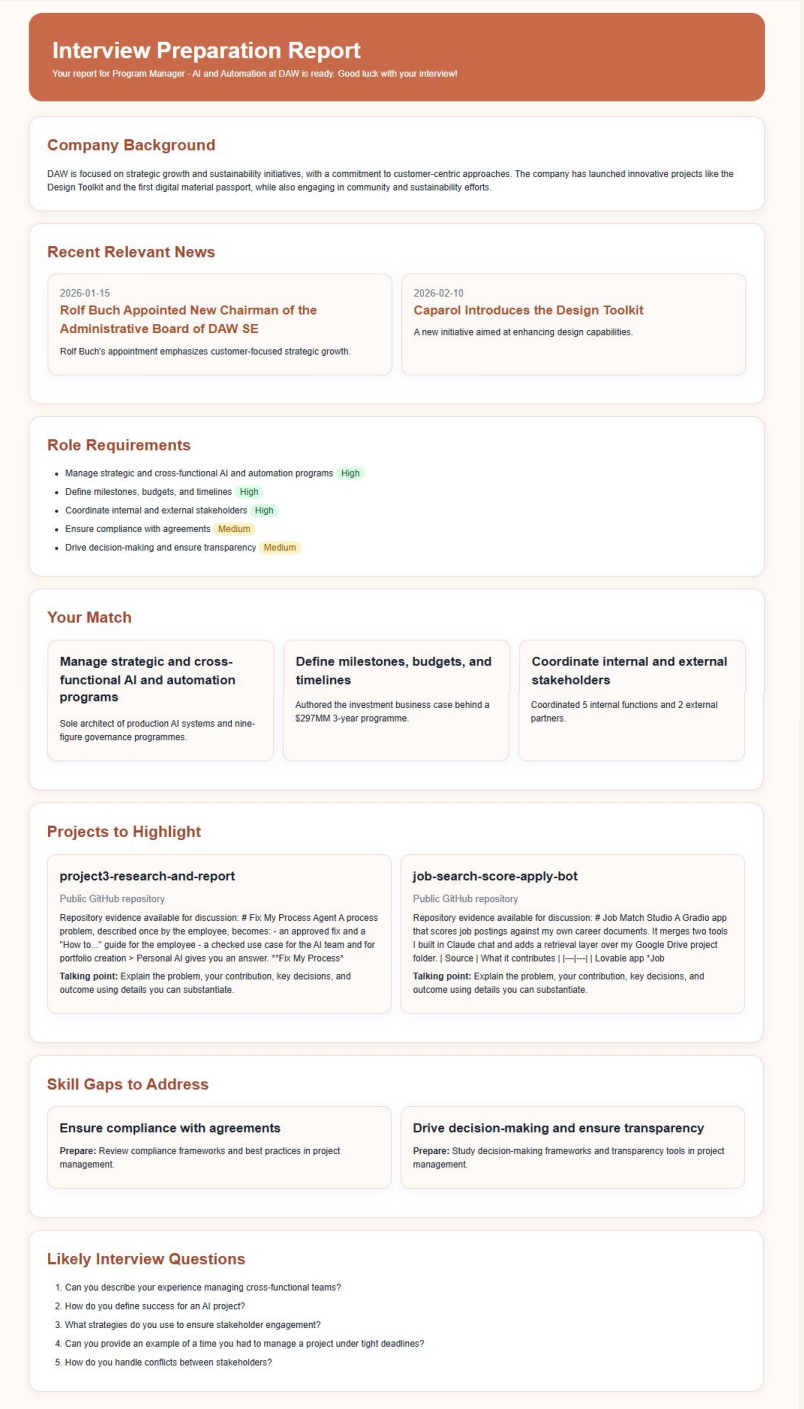

Company background, news, role fit, projects, gaps + five interview questions

Sources

News links are shown; company and candidate URLs are not.

Honest

Evidence is checked; unsupported candidate claims are removed.

SO WHAT · TECHNICAL SPECIFICATIONS

Under the hood

Part	What we use	Its job
Orchestration	n8n	Collects inputs and routes workflow steps
AI model	OpenAI GPT-4o-mini	Produces a structured interview report
Company research	Tavily + GNews	Company background and recent news
Candidate evidence	PDF CV + public GitHub	Supports experience and project matches
Validation	n8n Code rules	Checks sections, five questions and evidence
Delivery	HTML in n8n form	Shows report with evidence match and interview questions
Errors	Input Valid + Show Validation Error nodes & Notion alert nodes (create a validation-error page)	Missing a company name, job posting, or both candidate sources (PDF CV and GitHub profile) makes the submission invalid, so it does not reach the next node

Why n8n: the MVP is a known, inspectable sequence, not an open-ended agent loop.

NEXT · GO-TO-MARKET

What's next: go-to-market sprints

Sprint	Goal & audience	How we reach them	Deliverable	Success metric
1	Prove usefulness - job seekers (3 wk)	LinkedIn, alumni, bootcamp groups	Hosted beta + survey	20 reports; >=70% useful
2	Institutional pilot - career centers (4 wk)	Direct outreach + live demos	Pilot offer + demo pack	1 agreed pilot
3	Test paid offer - bootcamps career teams + coaches	LinkedIn + Referrals + coach networks	Pricing/cost offer + next commercial step	3-5 paying partners*

Future Improvements:

- *Cost/Time per completed report*
- *URL for job post + more candidate materials*
- *Language coverage and quality*
- *Add export and follow-up options*
- *Strengthen privacy controls*

Thank you!
